

gem "whenever", "~> 0.8.4"

What do we want?

- To check / send emails - reminders, etc.
- Rotate logs, or
- Do stuff!

When do we want it?

whenever

```
gem "whenever", "~> 0.8.4"
```

wheneverize

Adds a file 'config/schedule.rb'

config/schedule.rb

Write the schedule in ruby:

```
set :output, '/apps/my-app/shared/log/schedule.log'

every 5.minutes do
  rake 'send_emails'
#   command "/usr/bin/some_great_command"
#   runner "MyModel.some_method"
#   rake "some:great:rake:task"
end
```

Deploy

Writes stuff into your crontab for you, eg:

```
# Begin Whenever generated tasks for: My App  
  
0,5,10,15,20,25,30,35,40,45,50,55 * * * *  
/bin/bash -l -c 'cd /apps/my-app/releases/  
20131023042050 && RAILS_ENV=production bundle  
exec rake my_task --silent >> /apps/my-app/  
shared/log/schedule.log 2>&1'  
  
# End Whenever generated tasks for: My App
```

Capistrano

config/deploy.rb:

```
require "whenever/capistrano"  
set :whenever_roles, `schedule`  
set :whenever_environment, 'production'  
set :whenever_command, "bundle exec  
whenever"
```
